

Connecting the Dots: How Angular Components Work Together

Picking up a new framework with a new design paradigm can be daunting. You hear familiar names being tossed around (Components, Libraries, Objects), but they're being used in new and mysterious ways. In this talk we'll cover what some of these pieces are, how they're different, how to use them properly, and, most importantly, how they fit together as pieces of a greater whole. Come see why the Angular way of doing things is awesome (and easy).

Speaker: Scott McAllister

I have been building web applications in several industries for over a decade. I joined Smartsheet several years ago, building integrations with the Smartsheet API using languages like Java, Node.js, and Python. Now I am helping others learn about a wide range of web technologies.
